

## More about our Apple Mac Pro DIT Station

We work hard for making your job easier.

The main unit is mounted in a Rack case. We already did all the connections for you, so, forget about spending time setting up all the stuff you need for the shooting. Just start the computer, plug in the monitor, camera, your backup drives and....Start Shooting. Enjoy.

Why shooting on a Raid1 unit? - Because it is safe ( every single shot you did have, immediately, a backup) and....  
- Because it is not slowing down the shooting speed ( thunderbolt 2 and 3 speed are amazing ).

Why using a Dock Station for connectivity? One more time Thundelbolt 2 and 3 give us the possibility of improving the speed of the Mac Pro ports. At the same time, we are not overheating the port zone of our Mac, and we have the possibility of connecting more peripherals if needed.

We also provide two international power stripes ( EU, UK, EEUU), 2 Powered USB 3.0 Hubs , Hooks for cables and, of course, certificate of monitor calibration of each one, with the date of calibration, the results, and the monitor use hours.
